

Custom Engineered Cold Headed Fasteners —

Precision Secondary Operations

The Chandler Motor Car Company was founded in 1913 and produced quality automobiles until it was later sold to the Hupp Motor Car Company. Hupp then commissioned Chandler to produce fasteners and later Pontiac, American Motors, Oldsmobile and Cadillac were also purchasing their fasteners from **Chandler Products**.

Today Chandler is a recognized leader in the manufacture of custom engineered fasteners, specializing in small and medium production orders. Our dedication to quality is behind everything we do. It's why we're committed to continual improvement in our products and services. A commitment that starts when we first process your inquiry and continues until you receive — and are satisfied — with the finished product.

Chandler Products

Chandler Products

ISO 9001:2000 registered quality systems

Tight tolerances and multiple secondary operations for precision components used in heavy-duty diesel engines, transmissions and other demanding applications. Also engineered fasteners for the electrical, tool and military markets.

Quality Assurance

Our quality system is **ISO registered** and all processes are 100% statistically controlled to make sure that your part is made correctly, to your exact specifications, the first time. Each order is carefully reviewed to be certain that we understand, then meet all your requirements including print specifications, revision level, tolerances, price and delivery. We've been recognized for our dedication to quality throughout the industry, including receiving the General Motors Medallions for Excellence in all five categories.

Precision Secondary Operations

Chandler Products has a full complement of secondary equipment that allows us to perform operations on headed blanks so we can produce unique shapes and close tolerances. These operations include pointing, shaving, trimming, grinding, drilling and CNC work. We also offer in-house raw material shaving to ensure seam and decarb free material for critical product applications.

Inspections and Testing

We will produce parts that require extensive inspection procedures such as various PPAP levels, as well as standard certifications of conformance. Most test requirements are done in our **A2LA accredited laboratory**, including dimensions, hardness, tension and surface discontinuity testing. Chandler has been surveyed and approved by more than 20 major manufacturers. We also offer product certification programs including certification to government standards (**QSLM registered**).

Chandler Products and Elgin Fastener Group

Chandler Products is part of the Elgin Fastener Group, comprised of four leading domestic fastener manufacturers, a fastener engineering/import sourcing company and a metal finishing company. Collectively we offer a complete range of special, semi-standard and custom fasteners in a wide variety of styles, sizes, materials and finishes. With Elgin you get the right fastener and finish for your application.

**The right fastener
right now.™**
